

微信小程序简易全攻略《四》模板条件列表渲染完成模拟公众号自动回复 ...

最近突发奇想，如果微信小程序不在微信公众号里了该如何使用 自动回复呢？

先看下效果

话不多说 直接上代码

1.页面代码:

```
<swiper indicator-dots="{{indicatorDots}}"

      autoplay="{{autoplay}}" interval="{{interval}}" duration="{{duration}}">

  <block wx:for="{{imgUrls}}">

    <swiper-item>

      <navigator url="{{item.link}}" hover-class="navigator-hover">

        <image src="{{item.url}}" class="slide-image" width="355" height="150"/>

      </navigator>

    </swiper-item>

  </block>

</swiper>

<block>

  <input type="text" class="input-text" bindchange="setInputValue" placeholder="请输入你要咨询的内容"/>

  <button bindtap="getgetinputSEnd" class="input-button">发送</button>

</block>
```

```
<view class="chat-area">

  <view wx:for="{{msgs}}" wx:for-index="idx" wx:for-item="itemName">

    <view class="say-title">

      <block wx:if="{{idx%2 != 0}}"><text class="red-font">客服: </text></block>

      <block wx:if="{{idx%2 == 0}}"><text class="green-font">你: </text></block>

    </view>

    <view class="say-content">

      <block wx:if="{{itemName.type == 'video'}}">

        <video src="{{itemName.msg}}"></video>

      </block>

      <block wx:if="{{itemName.type == 'voice'}}">

        <audio src="{{itemName.msg}}" controls loop></audio>

      </block>

      <block wx:if="{{itemName.type == 'image'}}">

        <image src="{{itemName.msg}}"></image>

      </block>

    </view>

  </view>

</view>
```

```
        <block wx:if="{{itemName.type == 'text'}}">

            <text>{{itemName.msg}}</text>

        </block>

    </view>

</view>

</view>

</view>
```

页面中 使用了 模板的

条件渲染：<https://mp.weixin.qq.com/debug/wxadoc/dev/framework/view/wxml/list.html?t=1476197490824>

列表渲染：<https://mp.weixin.qq.com/debug/wxadoc/dev/framework/view/wxml/conditional.html?t=1476197492981>

2. 样式代码

```
.slide-image{

    width: 100%;

}

.input-text{
```

```
border:1px solid #abcdef;
```

```
width:88%;
```

```
background:#ddd;
```

```
line-height:100%;
```

```
text-indent: 0.5rem;
```

```
margin:1rem auto;
```

```
height:40px;
```

```
}
```

```
.input-button{
```

```
background:#48C23D;
```

```
margin:0.5rem 5%;
```

```
color:#fff;
```

```
}
```

```
.chat-area{
```

```
    width: 90%;
```

```
    margin:0.5rem 5%;
```

```
        border:1px solid #ddd;

        background:#eee;

        font-size: 1rem;

    }

    .red-font{

        color:#DC143C;

    }

    .green-font{

        color:#48C23D;

    }

    .say-content{

        font-size:80%;

        width:80%;

        margin:0.5rem 5%;

    }
```

3. js 代码

```
//test.js
```

```
//获取应用实例
```

```
var app = getApp();
```

```
Page({
```

```
  data: {
```

```
    imgUrl: [
```

```
      {
```

```
        link: '/pages/index/index',
```

```
        url: 'http://img02.tooopen.com/images/20150928/tooopen_sy_143912755726.jpg'
```

```
      }, {
```

```
        link: '/pages/logs/logs',
```

```
        url: 'http://img06.tooopen.com/images/20160818/tooopen_sy_175866434296.jpg'
```

```
      }, {
```

```
        link: '/pages/test/test',
```

```
        url: 'http://img06.tooopen.com/images/20160818/tooopen_sy_175833047715.jpg'
```

```
    }
```

```
],  
  
  indicatorDots: true,  
  
  autoplay: true,  
  
  interval: 5000,  
  
  duration: 1000,  
  
  msgs:[],  
  
  inputdata:'',  
  
  userInfo: {}  
},  
  
onLoad: function () {  
  
  console.log('onLoad test');  
  
  console.log(this.data.msgs);  
  
},
```

```
getgetinputSEnd:function() {  
  
    var input = this.data.inputdata;  
  
    var that = this;  
  
    var msgs = that.data.msgs;  
  
    msgs.push({msg:input, 'type':'text'});  
  
    //----- 微信数据请求  
  
    wx.request({  
  
        url: 'http://test.com:8080/test/socket.php',  
  
        data: {  
  
            msg:input  
  
        },  
  
        header: {  
  
            'Content-Type': 'application/json'  
  
        },  
  
        success: function(res) {
```

```
        msgs.push({msg:res.data.content,'type':res.data.msgType});  
        that.setData({msgs:msgs});  
        console.log(res.data)  
    }  
}))
```

```
},
```

```
setInputValue:function(e){  
    console.log(e.detail);  
    this.data.inputdata = e.detail.value;  
}
```

```
})
```

4. 服务器端代码

```
<?php
```

```
$params = $_REQUEST;
```

```
$msg = $params['msg'];
```

```
$content = array();
```

```
switch ($msg) {
```

```
    case '1':
```

```
    case '美女':
```

```
        $content['msgType'] = 'image';
```

```
        $content['content'] =
```

```
'https://ss0.baidu.com/7Po3dSag_xI4khGko9WTAnF6hhy/image/h%3D200/sign=ae4df4ec878ba61ec0eecf2f713497cc/43a7d933c895d143b233160576f082025aaf074a.jpg';
```

```
        break;
```

```
    case '2':
```

```
    case '音乐':
```

```
$content['msgType'] = 'voice';

$content['content'] = 'http://www.w3school.com.cn/i/song.mp3';

break;

case '3':

case '视频':

    $content['msgType'] = 'video';

    $content['content'] = 'http://www.w3school.com.cn//i/movie.ogg';

    break;

case '4':

case '笑话':

    $content['msgType'] = 'text';

    $content['content'] = '一男子在闹市骑摩托撞昏了一个陌生的老汉！男子惊吓的不知所措！围观群众越来越多！突然，该男抱住老汉，声泪俱下的喊道：“爹，你等着我，我这就去给...”；

    break;

default:

    $content['msgType'] = 'text';
```

```
$content['content'] = '您发送的指令不在识别范围内:'
```

```
    你可以选择
```

```
        1 美女
```

```
        2 音乐
```

```
        3 视频
```

```
        4 笑话 ';
```

```
break;
```

```
}
```

```
echo json_encode($content);
```
