微信小程序选项卡(窗口顶部 TabBar)及(窗口底部 TabBar)页面切换

一:窗口顶部 TabBar 页面切换

微信小程序开发中选项卡.在 Android 中选项卡一般用 fragment,到了小程序这里瞬间懵逼了. 总算做出来了.分享出来看看。

先看效果:

再上代码:

1.index.wxml

[html] view plain copy

```
1. <!--index.wxml-->
2. <view class="swiper-tab">
     <view class="swiper-tab-list {{currentTab==0?'on':"}}" data-current="0" bindtap="swichNav">哈哈</view>
3.
     <view class="swiper-tab-list {{currentTab==1?'on':''}}" data-current="1" bindtap="swichNav">呵呵</view>
4.
     <view class="swiper-tab-list {{currentTab==2?'on':''}}" data-current="2" bindtap="swichNav">嘿嘿</view>
5.
6. </view>
7.
   <swiper current="{{currentTab}}" class="swiper-box" duration="300" style="height:{{winHeight - 31}}px" bindchange="bindChange">
     <!-- 我是哈哈 -->
9.
     <swiper-item>
10.
       <view>我是哈哈</view>
11.
     </swiper-item>
12.
     <!-- 我是呵呵 -->
13.
```

```
      14. <swiper-item>

      15. 
      <view>我是呵呵</view>

      16. </swiper-item>

      17. <!-- 我是嘿嘿 -->

      18. <swiper-item>

      19. <view>我是嘿嘿</view>

      20. </swiper-item>

      21. </swiper>
```

2.index.wxss

[css] view plain copy

```
    /**index.wxss**/
    .swiper-tab{
    width: 100%;
    border-bottom: 2rpx solid #777777;
    text-align: center;
```

```
line-height: 80rpx;}
6.
7. .swiper-tab-list{ font-size: 30rpx;
      display: inline-block;
8.
      width: 33.33%;
9.
      color: #777777;
10.
11. }
12. .on{ color: #da7c0c;
      border-bottom: 5rpx solid #da7c0c;}
13.
14.
15. .swiper-box{ display: block; height: 100%; width: 100%; overflow: hidden; }
16. .swiper-box view{
      text-align: center;
18. }
```

3.index.js

```
1. //index.js
2. //获取应用实例
3. var app = getApp()
4. Page( {
    data: {
       * 页面配置
7.
       */
8.
     winWidth: 0,
     winHeight: 0,
    // tab 切换
    currentTab: 0,
13. },
14. onLoad: function() {
     var that = this;
15.
16.
```

```
17. /**
      * 获取系统信息
18.
      */
19.
     wx.getSystemInfo( {
20.
21.
      success: function( res ) {
22.
       that.setData( {
23.
        winWidth: res.windowWidth,
24.
        winHeight: res.windowHeight
25.
       });
26.
27.
28.
29. });
30. },
31. /**
    * 滑动切换 tab
32.
```

```
*/
33.
34. bindChange: function( e ) {
35.
      var that = this;
36.
      that.setData( { currentTab: e.detail.current });
38.
39. },
40. /**
41. * 点击 tab 切换
     */
42.
43. swichNav: function( e ) {
44.
      var that = this;
45.
46.
      if( this.data.currentTab === e.target.dataset.current ) {
       return false;
48.
```

这样一个类似 viewpage 的顶部选项卡就出来了.

二:窗口底部 TabBar 页面切换

微信小程序开发中窗口底部 tab 栏切换页面很简单很方便.

代码:

1.app.json

[html] view plain copy

```
1. //app.json
2. {
     "pages":[
      "pages/index/index",
      "pages/logs/logs"
5.
6.
     "window":{
      "backgroundTextStyle":"light",
8.
      "navigationBarBackgroundColor": "#999999",
9.
      "navigationBarTitleText": "tab",
10.
      "navigation Bar Text Style": "white"\\
11.
12. },
     "tabBar": {
```

```
"color": "#ccc",
14.
      "selectedColor": "#35495e",
15.
      "borderStyle": "white",
16.
      "backgroundColor": "#f9f9f9",
17.
      "list": [
18.
19.
        "text": "首页",
20.
        "pagePath": "pages/index/index",
21.
        "iconPath": "images/home.png",
22.
        "selectedIconPath": "images/home-actived.png"
23.
24.
       },
25.
        "text": "目录",
26.
        "pagePath": "pages/catalogue/catalogue",
27.
        "iconPath": "images/note.png",
28.
        "selectedIconPath": "images/note-actived.png"
29.
```

```
},
30.
31.
        "text": "我的",
32.
        "pagePath": "pages/mine/mine",
33.
        "iconPath": "images/profile.png",
34.
        "selectedIconPath": "images/profile-actived.png"
35.
36.
37. ]
38. }
39. }
```

pagePath 是页面路径.iconPath 是图片路径,icon 大小限制为 40kb. selectedIconPath:选中时的图片路径,icon 大小限制为 40kb tab Bar 的最多 5 个,最少 2 个. 在 pages 目录下写好页面即可切换.
